INTRODUCTION

Thank you for purchasing the TruLink™ Wireless USB to VGA and Audio Kit. This product utilizes the latest in wireless technology, so you can display video and images on a remote monitor, projector, or television up to 30 feet away. You can also send audio wirelessly to a display, audio device or set of speakers. With a highly secure connection you can use this product in settings such as conference rooms, classrooms, or in your home office/entertainment system. **We recommend that you read this manual thoroughly and retain for future reference.**

FEATURES

- ❖ In-room wireless connectivity up to 30 feet
- ❖ Conversion from USB format to UXGA/WSXGA video and two-channel stereo audio
- ❖ Video streaming up to 720p resolution (at 1024 x 768 setting)
- ❖ Native mode playback of high-resolution video
- ❖ Support for extended desktop and dual monitor screen modes
- ❖ Up to six computers can share one wireless display device*
- ❖ Ultra-Wide Band operates in the frequency of 3.1GHz to 4.8GHz (WiMedia™ Band Group 1)
- ❖ Certified Wireless™ USB 1.0 compliant
- ❖ WiMedia 1.0 MAC & 1.1 PHY compliant

SYSTEM REQUIREMENTS

- ❖ Microsoft® Windows® XP 32-bit with Service Pack 3 or higher
- ❖ or Microsoft® Vista® 32-bit/64-bit

PACKAGE CONTENTS

- ❖ Wireless USB Host Adapter for your computer
- ❖ Wireless VGA Device Adapter for your display
- ❖ Wireless Audio Device Adapter for your audio device
- ❖ Three (3) Dipole Antennas (one for each adapter)
- ❖ 3ft USB A Male/Mini-B Male Cable
- ❖ USB Extender with Cradle
- ❖ Two (2) AC Power Adapter (cord approx. 4ft)
- ❖ User Guide
- ❖ Quick Start Guide
- ❖ Driver CD w/Electronic User Guide

DEVICE OVERVIEW

WIRELESS USB HOST ADAPTER

1. Link: Data Connection Indicator
 - LED is solid when transfer device is connected
 - LED blinks when data is being transferred
2. PWR: Power
 - LED is solid when powered by the PC

DEVICE OVERVIEW

WIRELESS VGA DEVICE ADAPTER

1. VGA : VGA Activity Indicator

- LED is solid when display cable is connected.
- LED is blinking when data is being transferred.

2. PWR: Power Indicator

- LED is solid when power is applied.

3. 1-2-3: Status Indicator

- Illuminated number/s indicates the Wireless USB host adapter that is currently synced with the Wireless VGA Device Adapter

4. PWR plug

- Power adapter socket

5. RESET

- Association history can be erased by pressing and holding this button for 10 seconds.

6. HOST

- This button is used to select a different Wireless USB host adapter.

7. USB connector

- In wireless mode, this connector is used for cable association
- In wired mode, this connector is used for wired operation

8. WIRELESS/WIRED switch

- Choose from wired or wireless mode by using this switch.

DEVICE OVERVIEW

WIRELESS AUDIO DEVICE ADAPTER

1. Activity Indicator
 - LED is solid when display cable is connected.
 - LED is blinking when data is being transferred.
2. PWR: Power Indicator
 - LED is solid when power is applied.
3. PWR plug
 - Power adapter socket
4. USB connector
 - In wireless mode, this connector is used for cable association
 - In wired mode, this connector is used for wired operation
5. 3.5mm Stereo Audio Input
 - Connect your speakers or AV receiver to this input to output audio

SOFTWARE/DEVICE INSTALLATION

IMPORTANT NOTE:

- If installing on Windows XP, Service Pack 3 (SP3) is required. Verify that this has been installed before installing the Wireless USB To VGA Adapter Kit software.
- Before installing the software, make sure that the Wireless USB Host Adapter, Wireless VGA Device Adapter, and Wireless Audio Device Adapter are not connected to the computer. Also make sure that the Wireless VGA and Audio Device Adapters are not powered.

STEP 1-INSTALLING THE SOFTWARE

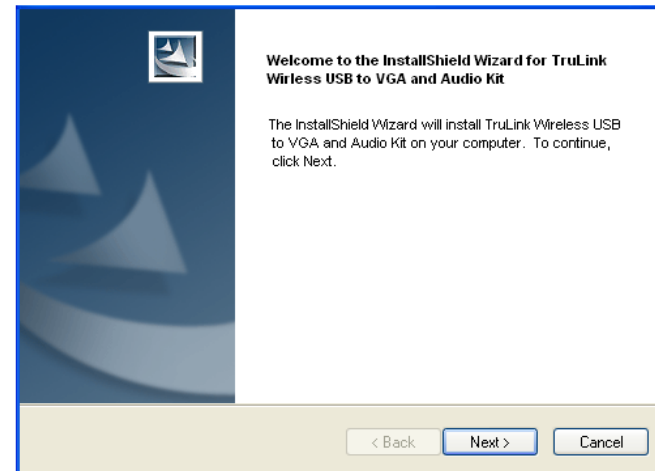

Insert the CD provided and the screen below will appear. Select the “Software Installation” from the menu.

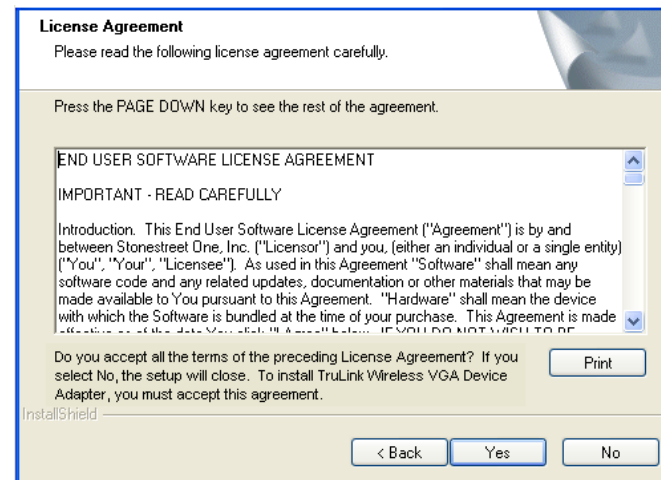

SOFTWARE/DEVICE INSTALLATION

This will take you to the TruLink Wireless USB to VGA and Audio Kit InstallShield Wizard.

Click “Next” to go to proceed with the install.

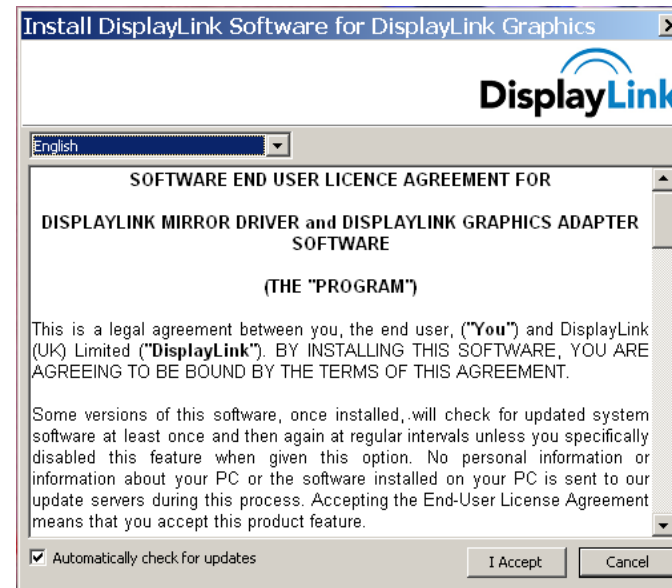

Read and accept the Wireless USB software License Agreement by clicking “Yes”.

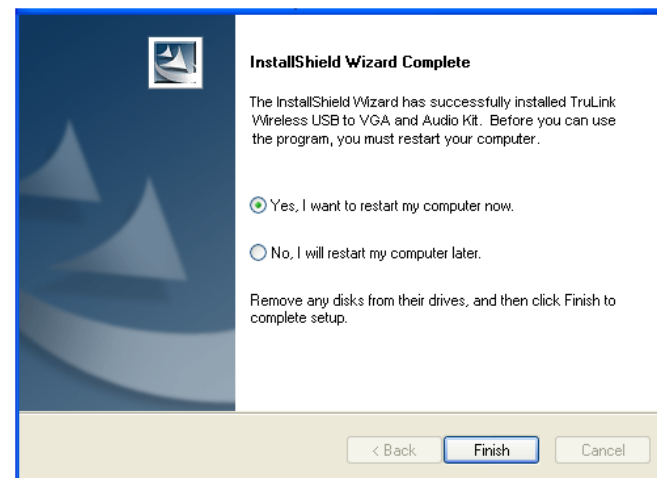

SOFTWARE/DEVICE INSTALLATION

Read and accept the License Agreement for the DisplayLink software.

After the software installs, your installation is complete and you can hit the "Finish" button to exit the wizard.
Important: reboot/restart if prompted.

SOFTWARE/DEVICE INSTALLATION

STEP 2A – DEVICE INSTALLATION FOR THE WIRELESS VGA DEVICE ADAPTER

1. Connect one of the dipole antennas to the Wireless VGA Device Adapter.
2. Power on your display device (i.e. monitor, projector, television).
3. Using a VGA cable, connect the Wireless VGA Device Adapter to your display device, and then plug in the power adapter to the Wireless VGA Device Adapter.

SOFTWARE/DEVICE INSTALLATION

STEP 2B-CONNECT THE WIRELESS AUDIO DEVICE ADAPTER

1. Connect another dipole antenna to the Wireless Audio Device Adapter.
2. Connect the Wireless Audio Device Adapter 3.5mm Stereo Audio Input to your PC audio speakers, sound system, projector or television using the appropriate cable or adapter types. Plug in the power adapter to the Wireless Audio Device Adapter.

SOFTWARE/DEVICE INSTALLATION

STEP 3 -DRIVER INSTALLATION FOR THE WIRELESS USB HOST ADAPTER

Your Wireless USB to VGA and Audio Kit has been pre-associated for you, meaning the Wireless USB Host Adapter will automatically recognize the Wireless VGA and Audio Device Adapters upon being powered and its successful driver installation. After the software installation you should see the Wireless USB Manager icon in your Windows icon tray. Double-click on this icon to open the manager utility.

Figure: Wireless USB Manager

The Wireless USB Manager will open and instruct you on what to do next (Figure: Wireless USB Manager Welcome Screen).

1. Screw on one of the supplied dipole antennas to the Wireless USB Host Adapter and connect the Wireless USB Host Adapter to an available USB port on your computer. You also have the option to connect the Wireless USB Host Adapter to the USB Cradle provided in the package if you need to make the adapter more mobile.

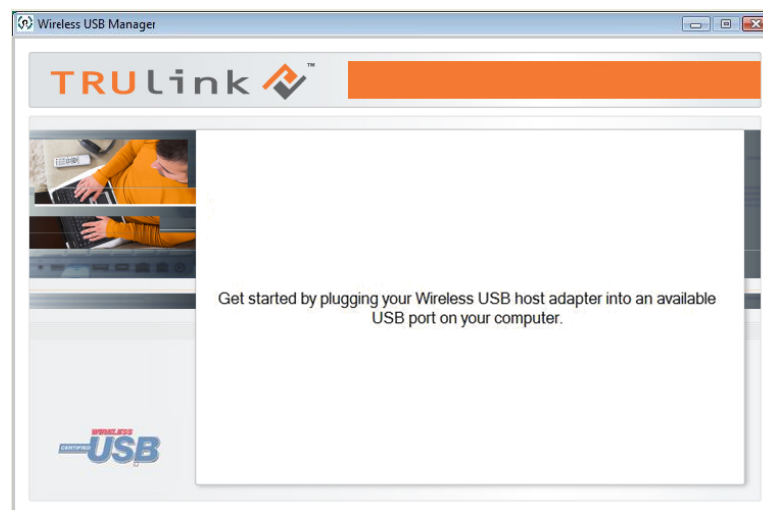

Figure: Wireless USB Manager Welcome Screen

SOFTWARE/DEVICE INSTALLATION

After you connect the Wireless USB Host Adapter to your computer, Windows will automatically install it and you should get a successful install message in your icon tray such as this figure shows.

Figure: Successful Install Message

SOFTWARE/DEVICE INSTALLATION

The Wireless USB Host Adapter will search for the Wireless VGA and Audio Device Adapters. When association is confirmed between the devices, the Activity Indicators will light up on the devices. The TruLink DisplayLink Manager utility (Figure: TruLink DisplayLink Manager) will activate and install an icon in the Windows icon tray. The TruLink Wireless USB to VGA and Audio Kit is now fully functional and you are ready to use it.

Figure: TruLink DisplayLink Manager

VERIFY CONNECTION

In the Wireless USB Manager, you should see each wireless device (Wireless VGA and Audio Device Adapter) icon represented (Figure: Wireless VGA and Audio Device Adapter Connected), which verifies an active connection status.

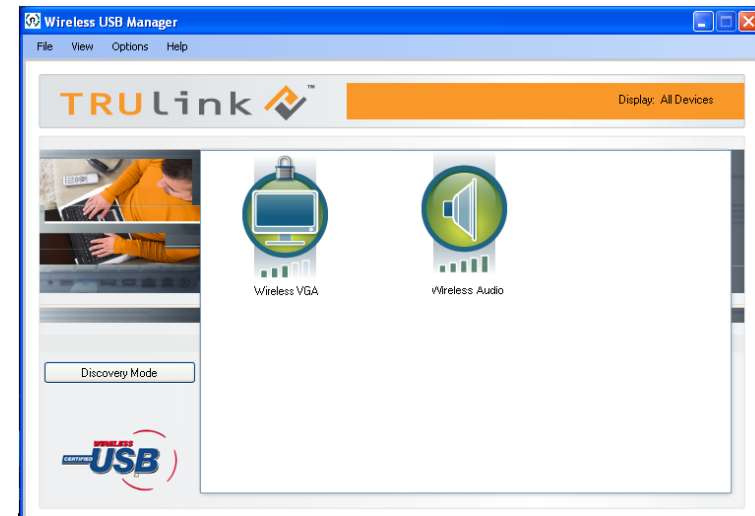

Figure: Wireless VGA and Audio Device Adapter Connected

SOFTWARE/DEVICE INSTALLATION

Note: The default setting extends your desktop to the right so you should see the desktop background on the wireless display device, but you will not see any icons initially. You may continue to use it in this setting allowing you to open applications and documents on the wireless display device to increase your viewing area or this may be switched to “Mirror” mode to clone your main display image. Settings are discussed further in the next section.

USING THE WIRELESS USB TO VGA AND AUDIO KIT

WIRELESS VGA DISPLAY SETTINGS

The TruLink Wireless VGA Device Adapter hosts a number of various settings so that you may configure your image to the way you need it.

After you have installed the Wireless USB to VGA and Audio Kit, an icon representing a monitor will appear in your Windows icon tray. This is the TruLink DisplayLink Manager. From this utility, you can adjust your image settings. To open the manager, right click on the icon in the Windows tray (Figure: TruLink DisplayLink Manager). A menu (Figure: Display Settings Menu) will appear and you will have the ability to change parameters such as resolution, color quality, mirror mode or extension mode and more.

Figure: TruLink DisplayLink Manager

USING THE WIRELESS USB TO VGA AND AUDIO KIT

NOTE: By default, your monitor will be set for the best resolution and will extend your screen to the right.

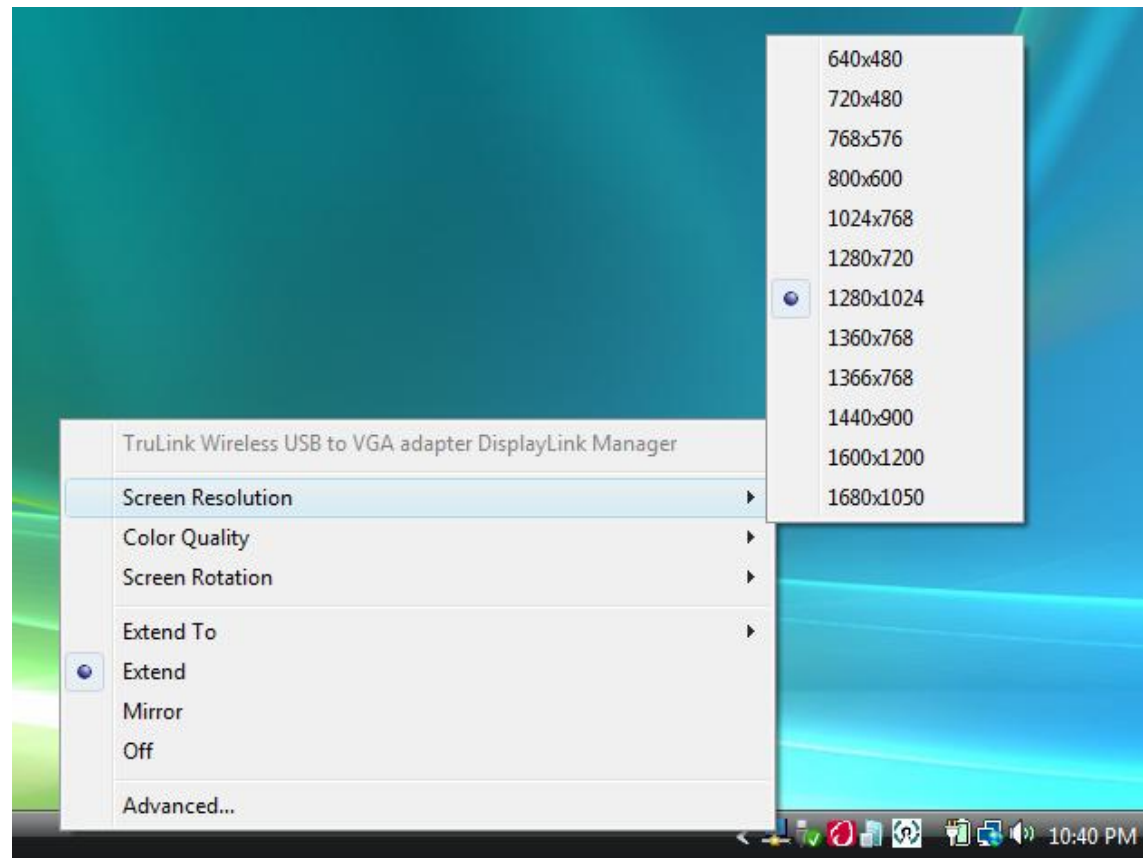

Figure: Display Settings Menu

USING THE WIRELESS USB TO VGA AND AUDIO KIT

MENU DESCRIPTIONS

Screen Resolution

This allows adjustment for your video's display capable screen resolutions. Please note that if all the options appear from the range of 640x480~1680x1050, your monitor will most likely only accept what its maximum capability is. You may want to refer to your specification section of your display user guide to see the optimal resolution. If you are using a notebook, Screen Resolution will only be available in Extended mode, as in Mirror mode your additional display will mimic the settings of your main notebook monitor.

Color Quality

In this setting you can adjust the color bits between Medium (16-bit) and High (32-bit).

Screen Rotation

This setting allows you to leave the display screen in Normal viewing mode, Rotated Left, Rotated Right, or Upside-Down viewing.

Extend To

If you are using Extended mode you can utilize this option to extend the display to the Right, Left, Above, or Below depending on where your monitor is positioned.

Extend

In this mode you can "extend" your desktop space to an additional monitor so you can have more view of different applications.

Mirror

In this mode you can duplicate your main monitor onto an additional monitor.

USING THE WIRELESS USB TO VGA AND AUDIO KIT

Advanced...

This will allow you to go into the Display Properties settings and make adjustments to your display settings.

WIRELESS USB HOST ADAPTER SELECTION

The “HOST” button on the Wireless VGA Device Adapter is used to switch between Wireless USB Host Adapters. By pressing this button, the Wireless VGA Device Adapter will look for the next associated Wireless USB Host Adapter in its list and connect to it. The 1-2-3 lights indicate which host is connected and will move position based on which host is currently associated. The LED scheme is as follows:

	Light	Light	Light
User 1	On	Off	Off
User 2	Off	On	Off
User 3	Off	Off	On
User 4	On	On	Off
User 5	Off	On	On
User 6	On	Off	On

USING THE WIRELESS USB TO VGA AND AUDIO KIT

Wireless VGA Device Adapter Reset

To erase all Wireless USB Host Adapters associated to your Wireless VGA Device Adapter, hold down the “RESET” button for 10 seconds. This will cause the Wireless VGA Device Adapter to erase all Wireless USB Host Adapters that have been associated from its list. A Wireless USB Host Adapter will then have to be re-associated with the Wireless VGA Device Adapter using one of the association processes (cable or pin association) in order to connect to the Wireless VGA Device Adapter again.

USING THE WIRELESS USB TO VGA AND AUDIO KIT

Wireless USB Manager

The Wireless USB Manager is simple and easy to use interface to manage your Wireless USB devices and control your Wireless USB Host Adapter settings. The Wireless USB Manager can be accessed via Wireless USB Manager Icon in the Windows tray (Figure: Wireless USB Manager Icon).

Figure: Wireless USB Manager Icon

To launch the Wireless USB Manager, double click on the Wireless USB Manager icon. In the main pane, you can find an icon representing your Wireless USB Host Adapter. If your Wireless USB Host Adapter is not connected, the icon will be gray (Figure: Wireless VGA and Audio Device Adapter Not Connected). If your Wireless USB Host Adapter is connected and ready to work, the icon will change color and show signal strength (Figure: Wireless VGA and Audio Device Adapter Connected-next page).

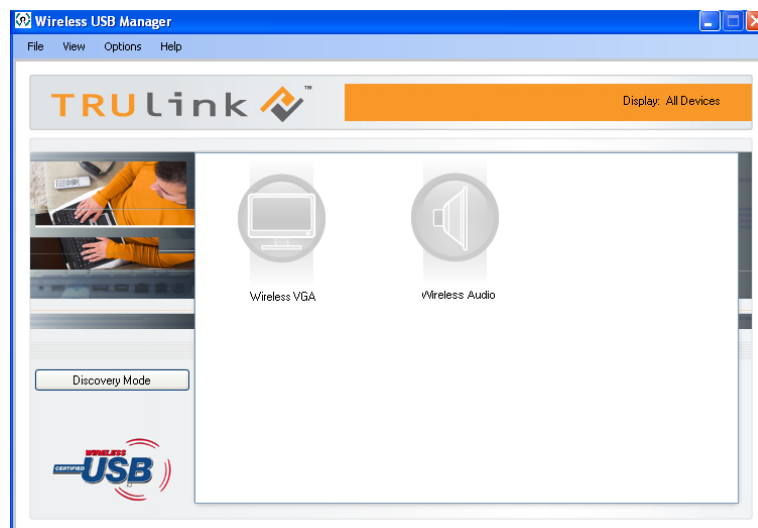

Figure: Wireless VGA and Audio Device Adapter Not Connected

USING THE WIRELESS USB TO VGA AND AUDIO KIT

The **VIEW** menu will give the option of what type of devices you wish to display (All Devices, Connected Devices and Not Connected Devices).

The **OPTIONS** menu will give the option to launch Host Settings window and turn the Wireless USB Host Adapter radio on or off.

The **HELP** menu offers quick help on how to connect devices to your Wireless USB Host Adapter.

Figure: Wireless VGA and Audio Device Adapter Connected

USING THE WIRELESS USB TO VGA AND AUDIO KIT

To manage the Wireless USB Host Adapter settings, either select “Host Settings” in the “Option” menu of the Wireless USB Manager application or right click on the Wireless USB Manager icon in the Windows tray.

GENERAL TAB (Figure: Host Settings – General)

1. Enable this Wireless USB radio: turn on or off the Wireless USB radio.
2. Host name: Change the name of your Wireless USB Host Adapter.
3. Cable association connection rules*: Always, Never or Ask me each time. By default Wireless USB will ask you each time you cable associate.

*Note that the cable association function is NOT needed to run your kit. This function will be used if you purchase additional Wireless USB devices.

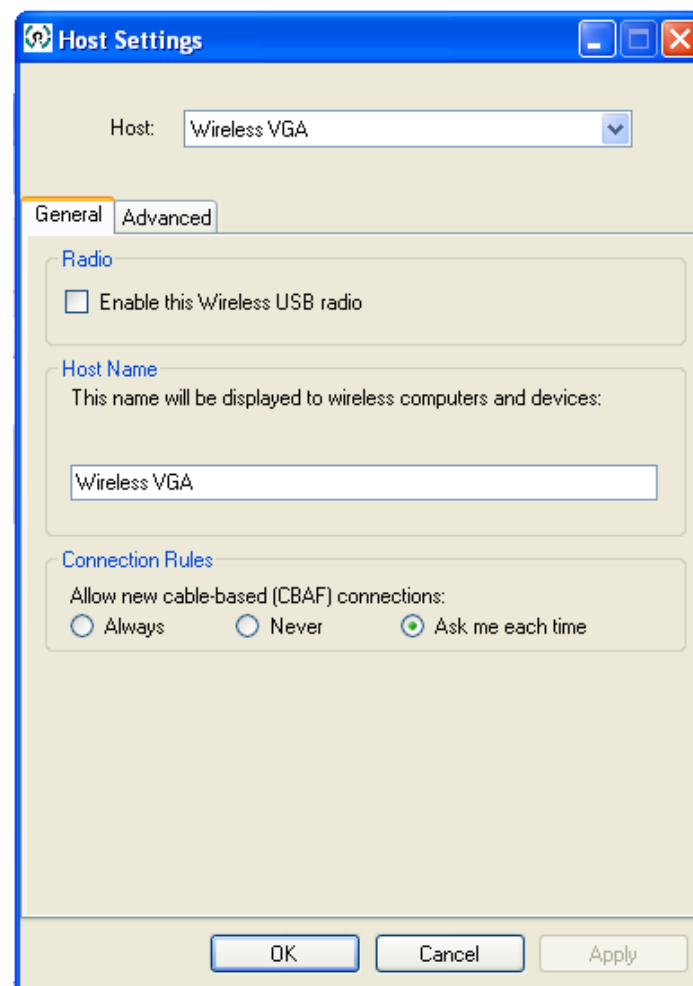

Figure: Host Settings - General

USING THE WIRELESS USB TO VGA AND AUDIO KIT

ADVANCED TAB (Figure: Host Settings – Advanced)

1. Channel selection: this function allows you to set manually a radio channel for the wireless communication (combination of Band Group and Channel). For optimal performance, the automatic setting is recommended.

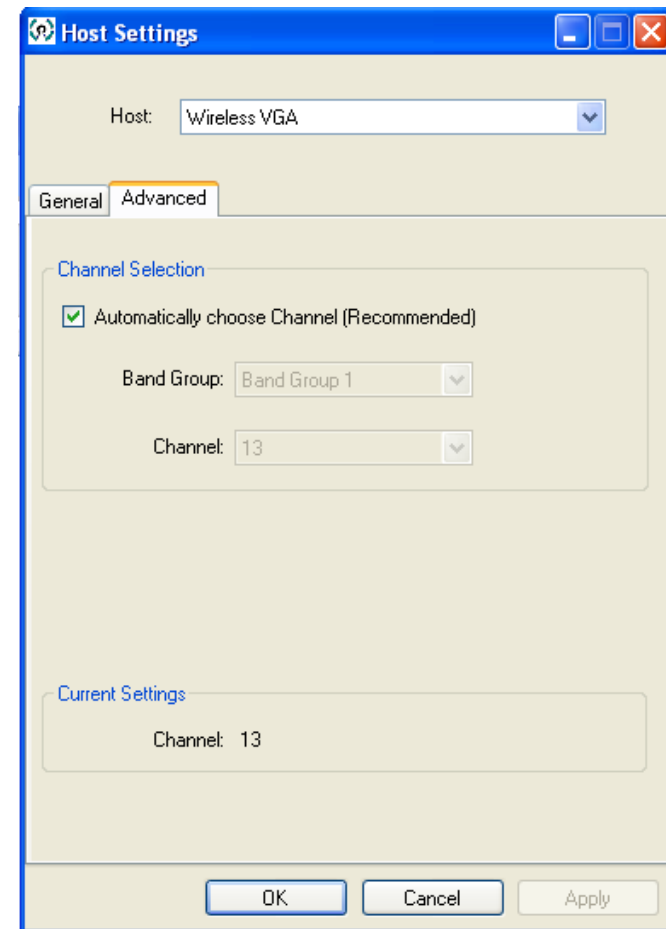

Figure: Host Settings - Advanced

FREQUENTLY ASKED QUESTIONS

1. Why can't I install .NET?

You may have an older version of .NET, preventing the newer one from being installed. Using Add/Remove Programs or Programs and Features on the Control Panel, uninstall any version of Microsoft .NET Framework™ older than version 3.0. Then install Microsoft .NET Framework™ from the Wireless USB to VGA and Audio Kit installer.

2. My Wireless USB Host Adapter is plugged into my computer and my Wireless VGA Device Adapter is powered but I do not see anything on my display. What's wrong?

Check the Wireless USB Manager to see if there is an icon for your Wireless VGA Device Adapter. If there is no icon, try unplugging and then plugging in your Wireless USB Host Adapter to reload the Wireless VGA Device Adapter.

If you see an icon that is gray in the Wireless USB Manager, try resetting the Wireless VGA Device Adapter by unplugging its power and plugging it back in. You should see the icon in the Wireless USB Manager appear in color when it is connected.

If both Activity Indicators are lit on the Host Adapter and VGA Device Adapter, check your icon tray and make sure that the DisplayLink Manager is there. If you do not see the DisplayLink Manager icon, the DisplayLink software is not active. You will need to reboot your computer, and when it restarts the software will finish its installation.

FREQUENTLY ASKED QUESTIONS

Still not connected?

Try adjusting the resolution from the TruLink DisplayLink manager. Some displays such as television type displays can be recognized as a default monitor and therefore your PC may set it as a default 1280x1024 which can be too high for the monitor. If your monitor is not capable of displaying that resolution, you will need to lower the setting.

3. Why is my video choppy?

If you are experiencing choppy video, try changing the channel (please refer to your Wireless USB Host Adapter settings for this) or move in your computer closer to the display.

4. I see a blue screen or my desktop background on my display connected with the Wireless VGA Device Adapter, but no icons. Is something wrong with my unit?

No, your unit is working properly. The default setting of this device will extend your desktop on the additional display. With this function, you can grab icons or open applications on that display to make your overall viewing space larger. The setting can be changed to Mirror mode, and with this, you can duplicate the image from your main display or laptop screen to the additional display.

5. I am having issues transmitting video during DVD playback when using Windows Media Player. Is my unit not working properly? If it is, can this be fixed?

Your unit is working properly. Although Windows Media Player works, it does not react well for all scenarios. Windows Media Player will only work on the display connected with the Wireless VGA Device Adapter, when you make this your primary display. To make it your primary display, you should go to the “Settings” tab in your Windows Display Properties and click the DisplayLink Device monitor, and check “Use this device as the primary monitor”. Then go to your primary monitor and if “Extend my Windows desktop on the monitor” is checked, uncheck this option. Your image should now transmit to the display connected with the Wireless VGA Device Adapter. Please note, this

FREQUENTLY ASKED QUESTIONS

setup will not allow use of the original display. We recommend using a DVD based playback software if possible (i.e. PowerDVD, WinDVD) as these players have less playback issues, and your wireless display does not have to be primary.

6. My Wireless USB Host Adapter is plugged into my computer and my Wireless Audio Device Adapter is powered but I do not hear anything out of my speakers. What's wrong?

Check the Wireless USB Manager to see if there is an icon for your Wireless Audio Device Adapter. If there is no icon, try unplugging and then plugging in your Wireless USB Host Adapter to reload the Wireless Audio Device Adapter.

If you see an icon that is gray in the Wireless USB Manager, try resetting the Wireless Audio Device Adapter by unplugging its power and plugging it back in. You should see the icon in the Wireless USB Manager appear in color when it is connected.

Still not connected?

If you are using an audio source such as an A/V receiver, make sure the receiver is on the right input channel.

VIDEO PLAYBACK TIPS

1. We only recommend playing back video in “Extend” mode.
2. Don’t switch between “Mirror” and “Extended” modes while video is being played on the wireless display. Doing this can confuse the video player which may cause it to stop its playback. We recommend stopping playback, and then switching viewing modes if needed. Then you can restart your playback.
3. Avoid dragging video while playing from one display to another. The video may stop playback if this is done. To void this potential issue, open your media player on the wireless display, close the media player, and then re-open it. When you re-open it, the media player should open on the wireless display. From here, you can start playback of your video.
4. Avoid changing the resolution of the wireless display while a video is being played back, as this can cause the image to move to another screen if one is connected.
5. If you experience issues with QuickTime movie trailers, the solution is to disable DirectX in the QuickTime options menu. This can be found in the “Advanced” tab in the QuickTime player plug in settings.

Please visit our website for these and other tips and frequently asked questions.

TECHNICAL SPECIFICATIONS

Systems Information

Operating System

Support: Microsoft XP 32-bit; Microsoft Vista 32-bit/64-bit

Operating Range: Up to 30 feet (10 meters)

PHY Data Rate: 53.3Mbps, 80Mbps, 106.6Mbps, 160Mbps, 200Mbps, 320Mbps, 400Mbps, 480Mbps

Frequency: 3.1GHz to 4.8GHz (WiMedia Band Group 1)

RF Modulation Type: QPSK/DCM

Number of Channels: 7 Channels (3 FFI + 4 TFI)

USB Specification: Certified Wireless USB 1.0

Security: AES 128-bit

Antenna Type: Omni-directional

Wireless VGA Device Adapter Specs

Interface: USB 2.0 mini-B female for wired association method: HD15 female

Video Resolution: Up to UXGA (1600x1200) or WSXGA+(1680x1050)

Video Streaming: Up to 720p (720p only available at resolution 1280x720 or lower)

Screen Mode: Extended and Mirror mode

Color Depth: 32-bit True Color

Association Mode: Pre-Association, Cable Association and PIN Association;
Stores up to 16 associated hosts

Native Mode: For playback of high resolution video

Reset Switch: Used for erasing association history by pressing and holding the button for 10 seconds

Wireless Audio Device Adapter Specs

Interface: USB 2.0 mini-B female for wired association, 3.5mm stereo audio output

Audio Output: 2 CH DAC output

Dynamic Range: 95db, THD+N -85db~91db

Sample Rate: 8kHz, 16kHz, 44.1kHz, to 48kHz with 16-bit resolution

Reset Switch: Used for erasing association history by pressing and holding the button for 10 seconds

Power Information

Power Consumption: 3.3W

Max Output Power: -41.3 dBm/MHz

Power Adapter: 5V, 2A; 100-240VAC 50-60Hz 0.5A

CABLES To Go™ WARRANTY STATEMENT

At Cables To Go, we want you to be totally confident in your purchase. That is why we offer a one year warranty on this device. If you experience problems due to workmanship or material defect for the duration of this warranty, we will repair or replace this device. To request a Return Merchandise Authorization (RMA) number, contact customer service at 1-800-293-4970 or www.cablestogo.com.

IMPORTANT SAFETY INFORMATION

! Do not plug the unit in any outlet that does not have enough current to allow the device to function. Refer to the specifications in this manual for power level of the unit.

! Liquid:

If this unit or its corresponding power adapter has had liquid spilled on or in it, do not attempt to use the unit. Do not attempt to use this product in an outdoor environment as elements such as rain, snow, hail, etc. can damage the product.

! In case of a storm, it is recommended that you unplug this device from the outlet.

! Avoid placing this product next to objects that produce heat such as portable heaters, space heaters, or heating ducts.

! THERE ARE NO USER SERVICEABLE PARTS

Do not attempt to open this product and expose the internal circuitry. If you feel that the product is defective, unplug the unit and refer to the warranty information section of this manual.

APPENDIX

ASSOCIATION WITH OTHER DEVICES

ASSOCIATION CONCEPT

In order to establish a secure wireless connection, both your Wireless USB Host Adapter and the Wireless VGA and Audio Device Adapters must exchange information about each other. This is done via cable or PIN association.

ASSOCIATION PROCESS

If you purchase additional Certified Wireless USB host adapters, such as the TruLink Wireless USB Host Adapter (part #29578), you will need to associate them with your Wireless VGA and Audio Device Adapters. Refer to your Wireless USB device documentation for more information on its settings for association or try contacting the product's manufacturer for assistance if needed.

APPENDIX

CABLE ASSOCIATION PROCEDURE

Cable association steps. Examples/Figures shown are used with the association of the TruLink Wireless VGA Device Adapter (part #29573) and TruLink Wireless Audio Device Adapter (Part # 29595) when used with the TruLink Wireless USB Host Adapter (part # 29578). This process will vary by manufacturer of your Wireless USB host adapter.

1. Make sure that the Wireless USB host adapter utility is running. Check your Windows tray for the Wireless USB Manager icon (Figure: Wireless USB Manager).
2. Make sure the WIRELESS/WIRED switch is in the WIRELESS position on the Wireless VGA Device Adapter.
3. Plug in the power adapter for your TruLink Wireless VGA Device Adapter.
4. Connect the USB cable between an available USB port on your computer and your Wireless VGA Device Adapter.
5. Complete cable association by pressing the “Accept Association” button when prompted (Figure: Cable Association).
6. Remove the USB cable from your Wireless USB Device Adapter and computer.
7. Repeat steps 1, 3-6 for the TruLink Wireless Audio Device Adapter because no switch is present on the unit from step 2.

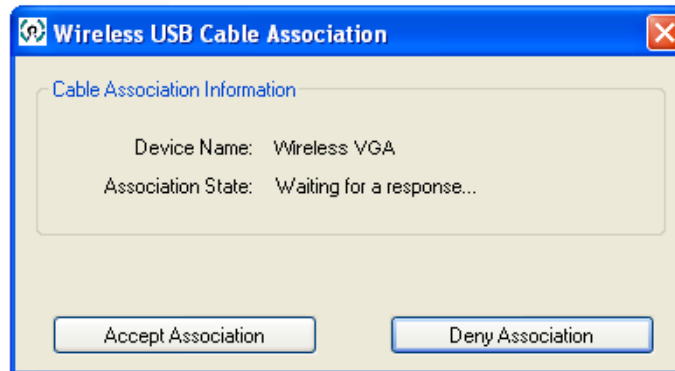

Figure: Cable Association

APPENDIX

Associated Certified Wireless USB Devices will appear as icons in the Wireless USB Manager. When the Certified Wireless USB devices are connected, the icon will appear in color (Figure: TruLink Wireless VGA and Audio Device Adapter Connected).

Figure: TruLink Wireless VGA and Audio Device Adapter Connected

Note: You may rename or delete the Wireless USB Device by right-clicking the device icon in the Wireless USB Manager and select "rename". You can also delete a wireless device adapter association by selecting "delete".

APPENDIX

PIN ASSOCIATION PROCEDURE

PIN association steps: Examples/Figures shown are used with the association of the TruLink Wireless VGA Device Adapter (part #29573) and TruLink Wireless Audio Device Adapter (Part # 29595) when used with the TruLink Wireless USB Host Adapter (part # 29578). This process will vary by manufacturer of your Wireless USB host adapter.

1. Make sure your Wireless VGA Device Adapter is powered on and your Wireless USB host adapter is connected to your computer. Click the “Discovery Mode” button (Figure: Discovery Mode Screen).

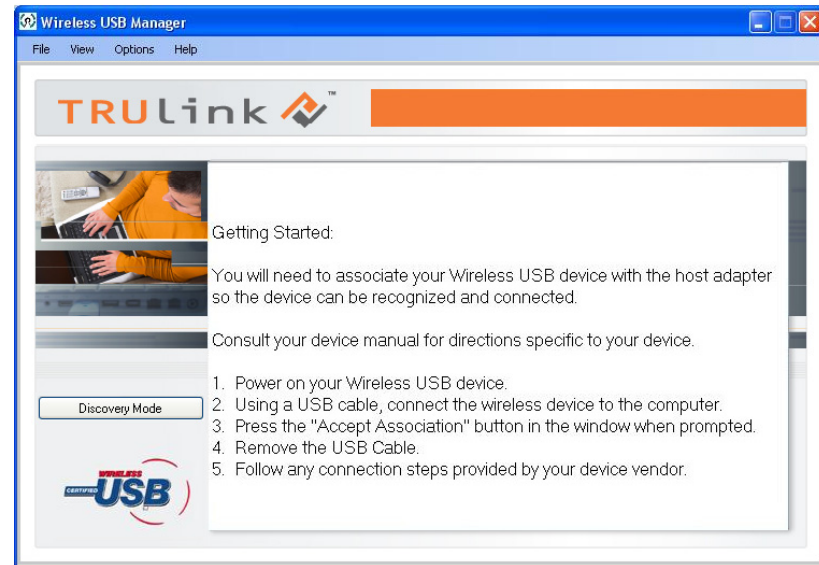

Figure: Discovery Mode Screen

APPENDIX

2. The Wireless USB Host Adapter will search for the Wireless VGA Device Adapter within its range. Note that this operation can take up to 20 seconds (Figure: Discovery Mode in Process).

Figure: Discovery Mode in Process

3. Once the Wireless USB Host Adapter and the Wireless VGA Device Adapter have exchanged security information, the following dialog will appear.

Figure: Pin Association Entry

APPENDIX

4. Enter the PIN of the Wireless VGA Device Adapter (4-digit PIN) and click Accept Association. The Wireless VGA Device Adapter and Wireless USB Host Adapter are now associated and ready for operation.
5. Repeat Steps 1-4 to PIN associate the TruLink Wireless Audio Device Adapter.

PIN CHANGE PROCEDURE

The default PIN setting for the Wireless VGA and Audio Device Adapters are “1234”. This section gives you the instructions to change the PIN to another 4-Digit value.

IMPORTANT: The application used to change the PIN is not supported in Vista 64bit.

1. Make sure your Wireless USB Host Adapter and the Wireless VGA/Audio Device Adapter are not connected to your computer.
2. Open/Launch the application “Pin Update” (C:\Program Files\Wireless USB Manager\Utility\PINUpdate). The following dialog will appear:

APPENDIX

3. Make sure the WIRELESS/WIRED switch on your Wireless VGA Device Adapter is in the WIRELESS position and the power cable is plugged in your Wireless VGA Device Adapter. Connect the USB cable between your Wireless VGA Device Adapter and any available USB port on your computer.

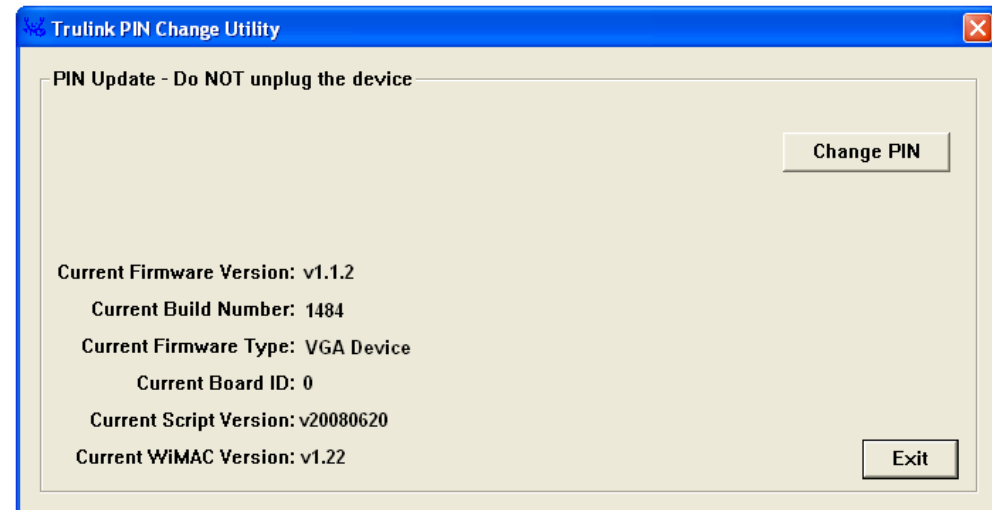

APPENDIX

4. Click Install this driver software anyway.

5. To change pin, click "Change PIN"

APPENDIX

6. Enter a 4-Digit PIN (0-9) and click OK.

7. If your PIN is valid, a window displaying your new PIN will appear. Press OK. Your PIN has been successfully changed. **IMPORTANT:** please exit the Trulink PIN Utility application (Exit button as shown on figure in step 5) before unplugging the USB cable between your Wireless VGA Device Adapter and your PC.
8. Repeat steps 1-7, to change the PIN of the Wireless Audio Device Adapter. Please note for step 3, no switch is present so you can proceed with connecting the USB cable.
